

NIA SELFIE VERIFICATION PLATFORM

The Selfie Verification Application onboarding process shall include the following:

1. Creation of a selfie account
2. Provision of a unique selfie token
3. The URL will be in the following form: `base_url/api/v1/third-party/verification`

Usage of API

The API has three input parameters

1. Ghana Card PIN
2. Account unique selfie token (*selfie token will be generated upon request*)
3. Portrait image.

Nature of the Image

1. The image captured should be a live image of the person.
2. The dimension for the cropped image should be 640 by 480
3. The portrait image should not exceed 1MB in size and should have sufficient lighting to ensure the face is clearly identifiable. Images larger than 1MB will impact the transmit and response time across the mobile network. Large images may result in a network timeout, blockage from NIA firewall or failure to perform accurate image comparison.
4. The image file is PNG. It should not be converted from JPEG to PNG.
